

When I learned Congress was involved with helping the NAB in an attempt to block Traffic and Weather information from being heard and broadcast on Satellite Radio I was floored. In an ever changing world and a country that grows continuously having the Traffic and Weather information available commercial FREE is an asset to drivers and listeners. The NAB and the Congress should be looking at the benefits rather than attempting to block what is helping many and is more a safety asset than a RADIO Station which updates every 10 or 15 minutes. And they are more worried about plugging their sponsors than telling the weather or traffic. CHANGE is part of the growing world and Satellite Radio is part of the change rather than block it we and you (NAB) SHOULD BE WORKING TO MAKE THIS WORK TOGETHER for all listeners. I think that is what our Country is build on.
